Summary

Analog Devices is benefiting from strengthening momentum across electric vehicle space on the back of its robust Battery Management System (BMS) solutions. Further growing power design wins are major positives. Additionally, rising adoption of advanced radio systems in 5G infrastructures is driving growth in the company's communication business. Furthermore, solid momentum of HEV platform across cabin electronics ecosystem remains a tailwind. The company remains optimistic about growth opportunities related to 5G. The stock has outperformed the industry it belongs to on a year-to-date basis. However, softness in the overall end-market conditions remains a major concern. Further, weakening momentum across major applications and sluggish communication activities are headwinds. Also, slowdown in global auto sales is a concern.

Overview

Analog Devices, Inc. is headquartered in Norwood, Massachusetts. The company is an original equipment manufacturer of semiconductor devices, specifically, analog, mixed signal and digital signal processing (DSP) integrated circuits.

The product line is composed of amplifiers and comparators; analog to digital converters; digital to analog converters; video encoders and decoders; embedded processing products and DSPs; MEMS and temperature sensors; RF/IF components and converters; power and thermal management ICs, audio/video converters, amplifiers, CODECs, filters and processors.

The company also offers analog, digital and RF switches and multiplexers; analog microcontrollers; clock and timing products; voltage references; interface products such as isolators, translators and transceivers; wireless products and converters; broadband products including amplifiers, CODECs, chipsets, splitters.

Analog Devices has manufacturing facilities in the United States, Ireland, and Southeast Asia. The company also uses outside foundries, mainly Taiwan Semiconductor Manufacturing Company for front-end processing and third-party subcontractors for back-end operations.

Notably, the company generated \$5.9 billion revenues in fiscal 2019.

The company generates revenues from four organized end-markets – Industrial, Consumer, Communications and Automotive.

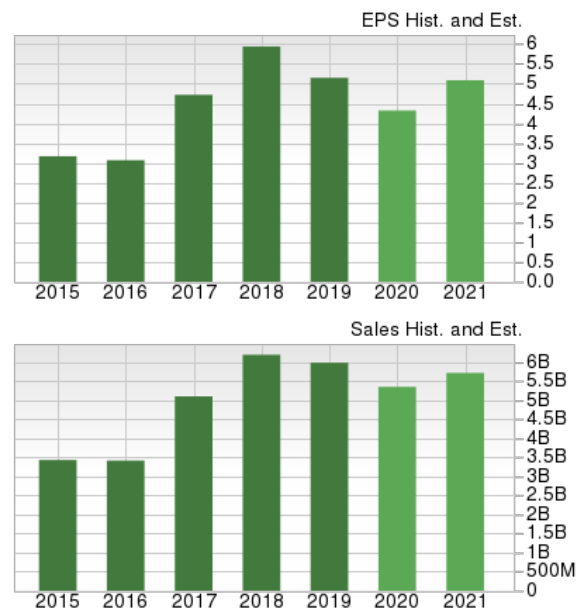

In Industrial market (50% of fiscal 2019 revenues), Analog Devices caters to the needs of industrial and instrumentation, defense/aerospace, energy management and healthcare sectors.

For Automotive market (16%), the company offers products that are utilized in infotainment, electrification, autonomous, ADAS and safety applications.

Further, the company takes care of the requirements in feature-rich, high-performance products such as portable devices and prosumer video/audio equipment in the Consumer market (13%).

In Communications market (21%), Analog Devices offers products required in internet infrastructures, broadband and wireless applications.

The company caters to the growing demand for its products in these afore mentioned markets via its strong sales channels. We note that it has direct sales offices, sales representatives and distributors in more than 50 countries.

Reasons To Buy:

- ▲ Analog Devices is the second largest producer of analog chips after Texas Instruments. The company should benefit from its strong market position in high performance analog (HPA), especially in the industrial, communications infrastructure and consumer markets. Within HPA, Analog Devices has a leading market position in converters, where it has around half the market share. Additionally, the company sells converters and amplifiers in integrated forms, which are categorized as “other analog” products. Analog Devices also has a leading position in the digital signal processor (DSP) market.
- ▲ The company has been investing in products for the automotive market, mainly because the electronic content in automobiles, particularly in the safety and infotainment areas, is on the rise. The Automotive electronics market is continuing to gain due to consumer demand for added technology and features in new vehicles and the transition to hybrid and electric vehicles. For instance, the company's start-stop technology that enables better fuel efficiency and compliance with CAFÉ standards has been widely adopted in Europe and is gaining traction in the U.S. Government mandated requirements that all new vehicles be equipped with better safety features and environmental controls is also an important growth driver. The fact that safety devices are moving from high-end to mainstream vehicles is also a positive for a company such as Analog Devices. Management's continuous collaboration with innovative TAR brands, development of new technology along with a strengthening in Europe and China should benefit the company. We expect the company to leverage its already-strong market position to drive deeper penetration, and possibly, take some market share.
- ▲ Analog Devices has a healthy communications business, where twin trends are currently driving revenues for the company. In the more developed economies, the market is driven by data density, meaning the need to expand infrastructure capacity to allow for rich media transfers (photos, video and so on). Moreover, the move to digital networks by carriers, such as AT&T is also driving demand for the company's products. In lesser developed economies, basic infrastructure needs have not yet been met in many cases. Therefore, growth in these regions is based on demand for building the network. The communications market (one of the largest consumers of analog chips) should see strong growth over the next few years. Most of the strength will however come from the wireless segment. We believe growing adoption of advanced radio systems in 5G infrastructure should continue to benefit the communications segment.

Analog Devices' diversified product portfolio is the key catalyst. Its leading market position and focus on communications, automotive and industrial markets remain major positive.

Reasons To Sell:

- ▼ Analog Devices is one of the older players in the analog market. While Maxim provides significant competition, Texas Instruments in particular could be something to worry about, as it has been taking market share in the high performance analog space. Since the National Semiconductor takeover, Texas Instruments' position in the market has strengthened further. Analog Devices continues to lead in the converter segment, but Texas Instruments remains a strong leader in all other categories.
- ▼ Analog Devices' **balance sheet remains leveraged**. As of Jan 31, 2020, the company's net debt amounted to \$4.7 billion, compared with \$4.8 billion reported in the previous quarter. Also, net cash from operations decreased significantly to 350 million, down 46.9% sequentially. However, debt to total capital was 32% (less than the industry average of 36.5%) as of Jan 31, 2020.
- ▼ Moreover, the company is trading at premium in terms of Price/Earnings (P/E). Analog Devices currently has a trailing 12-month P/E ratio of 17.48. This level compares unfavorably with what the industry witnessed in the last year. Additionally, the ratio is near the high end of the valuation range in this period. Consequently, the valuation looks slightly stretched from P/E perspective.

Analog Devices suffers from intensifying competition in the analog market which remains a risk for its market position.

Last Earnings Report

Analog Devices Q1 Earnings & Revenues Beat Estimates

Analog Devices reported first-quarter fiscal 2020 adjusted earnings of \$1.03 per share, beating the Zacks Consensus Estimate by 3%. However, the bottom line decreased 22.6% year over year and 13.4% sequentially.

Revenues of \$1.304 billion surpassed the Zacks Consensus Estimate of \$1.301 billion. However, the top line declined 15% year over year and 9.6% from the fiscal fourth quarter.

This downside can be attributed to weak performance of the company in all the end-markets served. Moreover, the top line was negatively impacted by macroeconomic headwinds.

Nevertheless, Analog Devices' deepening focus on efficient capital deployment and executing customer-centric approach remains a positive. Additionally, the company expects stabilization in the end-market demand in second-quarter fiscal 2020.

Revenues by End Markets

Industrial: The company generated revenues of \$744.1 million (accounting for 52% of total revenues), which was flat year over year.

Communications: Revenues from this market came in at \$260.1 million (18% of revenues), decreasing 19% year over year.

Automotive: Revenues from this market came in at \$226.1 million (16% of revenues), down 8% from the year-ago quarter.

Consumer: This market generated revenues of \$212.8 million (15% of revenues), reflecting a decline of 7% on a year-over-year basis.

Operating Details

Non-GAAP gross margin contracted 180 basis points (bps) on a year-over-year basis to 68.5%.

As a percentage of revenues, adjusted operating expenses were 31.6%, expanding 250 bps from the year-ago quarter.

Non-GAAP operating margin contracted 430 bps on a year-over-year basis to 36.9% during the reported quarter.

Balance Sheet & Cash Flow

As of Feb 1, 2020, cash and cash equivalents were \$654.4 million, up from \$648.3 million as of Nov 2, 2019.

Long-term debt was approximately \$4.7 billion, down from \$5.2 billion in the prior quarter.

Net cash provided by operations was \$349.6 million in the fiscal first quarter, down from \$658 million in the prior quarter.

The company generated \$294.8 million of free cash flow during the fiscal first quarter.

Additionally, Analog Devices returned \$300 million to shareholders through dividends and share repurchases in the reported quarter.

Guidance

For second-quarter fiscal 2020, Analog Devices expects revenues to be \$1.35 billion (+/- \$50 million).

Outbreak of coronavirus remains a concern for the company.

Non-GAAP earnings are expected to be \$1.10 (+/- \$0.08) per share.

The company anticipates non-GAAP operating margins to be approximately 37.5% (+/- 100 bps).

Recent News

On **Jan 22, 2020**, Analog Devices entered into partnership with Hyundai per which its Automotive Audio Bus technology will be leveraged to introduce all-digital road noise cancellation system, the first of its kind in the automotive industry.

On **Dec 2, 2019**, Analog Devices acquired a client namely Rimac Automobili. Notably, the latter plans to integrate the former's precision battery management system (BMS) integrated circuits into its own BMS.

On **Oct 29, 2019**, Analog Devices announced the acquisition of Test Motors, which offers products and services that detect faults in electric motors before they cause damage to production cycles. The move bodes well for Analog Devices' continued focus toward Industry 4.0. The latest buyout will strengthen the company's condition-based monitoring solutions offerings.

Valuation

Analog Devices shares are down 12.7% in the year-to-date period and 2.8% over the trailing 12-month period. Stocks in the Zacks sub-industry and the Zacks Computer & Technology sector are down 14% and 0.5% in the past year-to-date period, respectively. Over the past year, the Zacks sub-industry and the sector are up 2.5% and 14.1%, respectively.

The S&P 500 index is down 11% in the past year-to-date period but up 1% in the past year.

The stock is currently trading at 21.95X forward 12-month earnings, which compares to 24.07X for the Zacks sub-industry, 23.38X for the Zacks sector and 20.16X for the S&P 500 index.

Over the past five years, the stock has traded as high as 24.82X and as low as 13.31X, with a 5-year median of 18.47X. Our Neutral recommendation indicates that the stock will perform in-line with the market. Our \$109 price target reflects 20.8X forward 12-month earnings.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	F
Growth Score	D
Momentum Score	A
VGM Score	D

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.
