Summary

Mylan's new products continue to maintain momentum. It achieved the target of \$1 billion from Wixela, the generic of Advair Diskus, and Fulphila, and several other products in the fourth quarter. Other products like Creon, Influvac, Dona, Amitiza, Glatiramer Acetate 40 mg and Yupelri are also performing well. The company has ramped up the production of hydroxychloroquine sulfate tablets to meet the increased demand resulting from the potential effectiveness of the product in treating COVID-19. Meanwhile, the company's decision to merge with Upjohn, Pfizer's off-patent branded and generic established medicines business, is a positive. However, rising competition for EpiPen is a concern. Moreover, Mylan is embroiled in various lawsuits, which is a major overhang on the shares. Shares have underperformed the industry in the past year.

Overview

Mylan N.V. is a global pharmaceutical company with a well-established generics business as well as a presence in specialty pharmaceuticals. The company's business model includes the development, manufacturing and marketing of branded and generic drugs as well as active pharmaceutical ingredients (APIs) in North America, Europe and Rest of World. Notably, Mylan has one of the world's largest API operations.

Mylan has been making prudent acquisitions and inking strategic deals to drive long-term growth. In February 2015, the company acquired Abbott Laboratories' non-U.S. developed markets' specialty and branded generics business. Further, in November 2015, it acquired certain female health care businesses of Famy Care. In June 2016, Mylan acquired the non-sterile, topicals-focused business of privately held Renaissance Acquisition Holdings for about \$1 billion. In August 2016, Mylan acquired Swedish drug manufacturer, Meda, in a deal valued at \$9.9 billion. All these buyouts augmented the company's diversified product portfolio and expanded its range of capabilities.

The company reports results under the following three segments on a geographic basis: (1) North America, (2) Europe and (3) Rest of World. The North America segment accounts for operations in the United States and Canada and includes the results of previously reported Specialty segment. The segment primarily develops, manufactures, sells and distributes pharmaceutical products in tablets, capsules, injectables, transdermal patches, gels, nebulized and creams or ointment forms and accounted for 36% of total sales. Europe accounted for 37% of total sales and Rest of the World accounted for 27%. While Mylan's Specialty portfolio consists mainly of branded specialty injectable and nebulized products and competes primarily in the respiratory and severe allergy markets. The most significant product in this segment is EpiPen auto-injector, used to treat severe allergic reactions like anaphylaxis. The Europe segment comprises operations in 35 countries within the region. The Rest of World segment caters to operations in India, Australia, Japan and New Zealand.

Revenues for 2019 came in at \$11.50 billion, up 1% from 2018.

Reasons To Buy:

- ▲ **Merger with Upjohn Looks Positive:** We are positive on Mylan's merger announcement with Upjohn, Pfizer's off-patent branded and generic established medicines business (includes Lipitor, Celebrex and Viagra), to create a new global pharmaceutical company. Per the agreement, which is structured as an all-stock, Reverse Morris Trust transaction, each Mylan share would be converted into one share of the new company.

Pfizer's shareholders would own 57% of the combined entity, while Mylan's shareholders would own the remaining 43%. The transaction has been unanimously approved by the boards of both the companies. The new company boasts a diverse portfolio across many geographies and focuses on key therapeutic areas. The new company is expected to generate revenues of \$19-\$20 billion for 2020. Mylan has been plagued with various problems of late like lawsuits and pricing pressure among others. Hence, the merger with Upjohn will provide the company a chance to turn over a new leaf and focus more on emerging markets. The combined business (EpiPen, Lipitor, Celebrex and Viagra among others) will be one of the leading generic businesses in the world.

Mylan's Generics segment has been performing impressively. Launch of new generic drugs should boost revenues significantly. Prudent acquisitions also bode well for long-term growth.

- ▲ **Generics Segment Driving Revenues:** Mylan's Generics segment has been boosted by product launches amid a challenging pricing environment. The addition of Abbott's non-U.S. developed markets' branded generics business also boosted the segment. The company won FDA approval for a generic version of Copaxone (40 mg) in October 2017 and has gained a market share of approximately 35% in this space. Moreover, Mylan received a significant boost, when the FDA approved its generic version of GlaxoSmithKline's Advair Diskus — Wixela Inhub — following a few setbacks. Notably, this was the first approved generic of Advair Diskus, which provided Mylan an edge in the market. The market potential is huge for Wixela and the generic has already captured a significant market share. The company recently launched a generic version of AstraZeneca's Faslodex Injection for breast cancer.
- ▲ **Biosimilar Pipeline Progress:** Mylan is also exploring the world of biosimilars, a market that has the potential to grow to \$20 billion in 2020. A partnership with Biocon, and collaborations with Momena and Mabion has helped Mylan develop a portfolio of 20 biosimilar/insulin analog generic products. The Biocon partnership includes six biosimilar programs — biosimilar versions of Herceptin, Neulasta, Humira, Avastin, Enbrel and Neupogen — and three insulin analogs — Lantus, Humalog and NovoLog. Mylan received a major boost with the FDA approval of Ogivri, the biosimilar version of Herceptin, and expects to launch it shortly. In March 2018, Mylan and Biocon announced that their co-developed biosimilar insulin glargine Semglee has obtained approval from the European Commission (EC). The companies also obtained FDA approval for Fulphila, a biosimilar of Neulasta, which has significant potential. Mylan recently launched Ogivri (trastuzumab-dkst), a biosimilar of Roche's blockbuster breast cancer drug, Herceptin (trastuzumab), in the United States. The biosimilar of Avastin is under review in the United States. The biosimilar of Avastin is under review in the United States. The FDA has accepted the Biologics License Application (BLA) for MYL-1402O, a proposed biosimilar to Avastin (bevacizumab).
- ▲ **Acquisitions and Deals to Drive Growth:** Mylan has been undertaking prudent acquisitions and inking strategic deals to drive long-term growth. The Topicals Business gave Mylan a complementary portfolio of commercial and pipeline products, and an established sales and marketing infrastructure targeting dermatologists in the United States. On the other hand, Meda acquisition provided the company with a diversified and expansive portfolio of branded and generic medicines along with a strong and growing portfolio of over-the-counter (OTC) products. The Meda acquisition has also expanded Mylan's OTC presence into a \$1-billion business. Moreover, the acquisition of Meda expanded the company's footprint in key emerging markets, including, China, Russia, Turkey, and Mexico, and in countries in South East Asia, and the Middle East, which complemented Mylan's existing presence in India, Brazil and Africa (including South Africa). In August 2018, Mylan acquired worldwide rights to cystic fibrosis products TOBI Podhaler and TOBI solution from Novartis, which should broaden the former's respiratory portfolio.
- ▲ **Favorable Debt Profile:** As of Dec 31, 2019, Mylan's total debt to total capital ratio stood at 51.7X which compares favorably to the industry's 54.8X. A lower ratio indicates greater financial risk and vice versa.

Reasons To Sell:

- ▼ **Share Price Performance:** Mylan's stock has underperformed the industry in the past year. The decline can be attributed to a lawsuit filed by around 44 state attorneys against a few companies, which make generic drugs. Mylan was one of these companies. The lawsuit alleges a conspiracy to artificially inflate prices and reduce competition.

Moreover, Mylan recently warned that its business might be impacted by the outbreak of the Coronavirus, given the global nature of the company's supply-chain operations and businesses.

The EpiPen woes continue to plague Mylan. In addition, the failure of the biosimilar study was also disappointing.

- ▼ **Increasing Competition:** Competition has stiffened for EpiPen. Rival Teva Pharmaceutical won the FDA approval for the first generic version of Mylan's EpiPen and EpiPen Jr (epinephrine) auto-injector for the emergency treatment of allergic reactions, including those that are life-threatening (anaphylaxis), in adult and pediatric patients. This in turn will impact sales.

Moreover, the SEC charged Mylan for accounting and disclosure failures relating to a Department of Justice (DOJ) probe into whether the company overcharged Medicaid by hundreds of millions of dollars for its largest product, EpiPen. The SEC stated that investors were kept in the dark about EpiPen misclassification and the potential loss the company faced as a result of the pending investigation into the misclassification. Consequently, Mylan has agreed to pay \$30 million as charges for the same. Per SEC's complaint, the company misclassified EpiPen as a "generic" drug under the Medicaid Drug Rebate Program. This led Mylan to pay much lower rebates to the government than what it would have paid if EpiPen had been classified as a "branded" drug. The complaint also states that the Centers for Medicare and Medicaid Services (CMS) informed the company in October 2014 about this misclassification. Thereafter, the DOJ conducted a civil investigation into whether the company misclassified EpiPen and thereby overcharged the government for the drug's sales to Medicaid patients. The investigation started in November 2014 and continued for nearly two years. During the investigation, DOJ issued multiple subpoenas and investigative demands, rejected Mylan's arguments to close the investigation, and indicated its intent to sue the company if it failed to make a settlement offer. Moreover, the complaint alleges that Mylan produced documents and other information to DOJ, including potential damage calculations and offers for settlement. The allegations of misclassification and resultant charges further add to Mylan's woes.

- ▼ **Pipeline Setbacks:** In a major setback, the company and partner Momenta reported disappointing results from a phase I study on the biosimilar version of Orencia. The study failed to meet primary endpoints. Any additional failures will be detrimental to the company's growth prospects.

- ▼ **Delay in Generic Approvals:** The company's efforts to get Advair's generic approved suffered a blow, when the FDA issued a complete response letter to its ANDA for generic Advair. Although the FDA has approved the generic, similar setbacks are likely to weigh on the stock.
-

Last Earnings Report

Mylan's Q4 Earnings Beat, Revenues Miss Estimates

Mylan reported adjusted earnings of \$1.40 per share in the fourth quarter of 2019, beating the Zacks Consensus Estimate of \$1.29. Also, the reported figure improved from the year-ago quarter's \$1.30.

However, quarterly revenues of \$3.19 billion missed the Zacks Consensus Estimate of \$3.21 billion. Revenues increased 4% reportedly and 5% at constant exchange rate ("CER") from the prior-year quarter.

Quarter Ending **12/2019**

Report Date	Feb 27, 2020
Sales Surprise	-0.62%
EPS Surprise	8.53%
Quarterly EPS	1.40
Annual EPS (TTM)	4.42

Quarter in Detail

The company posts results in three segments on a geographic basis — North America, Europe and Rest of World.

The North America segment's net sales came in at \$1.13 billion, up 3% year over year. This increase was primarily driven by new product sales, partially offset by a decline in sales of existing products due to lower volumes, and lower pricing, to some extent. New product sales were primarily aided by sales of the Wixela Inhub and other new products. The lower sales of existing products came in due to changes in the competitive environment, including the loss of exclusivity of tadalafil.

Net sales in the Europe segment came in at \$1.11 billion, up 2% year on year. This upswing primarily resulted from new product sales and higher volumes of existing products. Net sales in the segment were up 5% at CER.

The Rest of World segment net sales of \$927.9 million were up 9% on higher volumes of the existing products sold in certain emerging markets, China and Japan, as well as new product sales, primarily in Australia, India and certain emerging markets. Net sales were up 9% at CER.

Adjusted gross margin of 53.3% declined from the year-ago quarter's 54.6%.

2019 Results

Revenues for the full year came in at \$11.50 billion, up 1% from the prior year. Earnings per share came in at \$4.42 compared with the \$4.58 recorded in 2018.

2020 Guidance

Revenues are projected between \$11.5 billion and \$12.5 billion.

Recent News

European Commission's Conditional Approval of the Combination of Mylan and Pfizer's Upjohn Division – Apr 22

Mylan announced that it has received the European Commission's (EC) approval of the impending merger of the former and Upjohn, conditioned upon the completion of the sale of certain of Mylan's products in Europe.

Positive CHMP Opinion for Biosimilar Etanercept – Mar 27

Mylan and partner Lupin Limited announced that the European Medicines Agency's Committee for Medicinal Products for Human Use (CHMP) has adopted a positive opinion recommending the approval of Nepexto, a biosimilar to Enbrel for all indications of the branded drug, including rheumatoid arthritis, juvenile idiopathic arthritis, psoriatic arthritis, axial spondyloarthritis (including ankylosing spondylitis and non-radiographic axial spondyloarthritis), plaque psoriasis and paediatric plaque psoriasis.

Update on Combination With Upjohn – Mar 26

Mylan and Pfizer announced that the proposed combination of the former and Upjohn, a division of the latter, is now anticipated to close in the second half of 2020 due to the unprecedented circumstances surrounding the COVID-19 pandemic, including associated delays in the regulatory review process.

Mylan's extraordinary general meeting of shareholders to approve certain matters in connection with the transaction has been rescheduled from Apr 27 to Jun 30.

Support in Response to COVID-19 – Mar 25

Mylan announced that it has voluntarily waived its exclusive rights in the United States to distribute the generic version of Kaletra (lopinavir/ritonavir) antiretroviral 100mg/25mg and 200mg/50mg tablets to help increase the supply of the product, should it prove effective in the treatment of coronavirus.

Ramps Up U.S. Manufacturing of Hydroxychloroquine – Mar 19

Mylan has restarted production of hydroxychloroquine sulfate tablets at its West Virginia manufacturing facility in the United States to meet the potential for increased demand resulting from potential effectiveness of the product in treating COVID-19. Mylan's hydroxychloroquine sulfate tablets are approved by the FDA for the treatment of malaria, lupus erythematosus and rheumatoid arthritis.

Mylan expects that it will be able to ramp up manufacturing to provide 50 million tablets to potentially treat a total of more than 1.5 million patients. The potential use of this medicine for COVID-19-related treatment is pending additional FDA and other regulatory body guidance.

Wins District Court Decision Against Sanofi's Lantus SoloSTAR Patent – Mar 10

Mylan announced that the U.S. District Court of New Jersey found the device patent claims (U.S. Patent No. 9,526,844) asserted by Sanofi against the company's insulin glargine product to be not infringed and invalid for lack of written description.

FDA Accepts BLA for Proposed Biosimilar Bevacizumab for Review – Mar 9

Mylan and Biocon announced that the FDA has accepted the Biologics License Application (BLA) for MYL-1402O, a proposed biosimilar to Avastin (bevacizumab), for review under the 351(k) pathway.

The BLA seeks approval of bevacizumab for first-line and second-line treatment of patients with metastatic colorectal cancer in combination with fluorouracil-based chemotherapy; first-line use for patients with non-squamous, non-small cell lung cancer; recurrent glioblastoma; metastatic renal cell carcinoma in combination with interferon alfa; and persistent, recurrent or metastatic cervical cancer.

The FDA goal date set under the Biosimilar User Fee Act (BsUFA) is Dec 27, 2020.

Viatis Chief Financial Officer – Feb 27

Mylan announced that Sanjeev Narula, current chief financial officer (CFO) of Upjohn, a division of Pfizer, has been named incoming CFO of Viatis, the new company that will result from the planned combination of Mylan and Upjohn. The closing is expected in mid-2020.

Valuation

Mylan's shares are down 15.4% in the year-to-date period and 37.2% over the trailing 12-month period. Stocks in the Zacks sub-industry and the Zacks Medical sector are down 4.3% and 3.4% in the year-to-date period, respectively. Over the past year, the Zacks sub-industry is down 3% while the sector is up 1.7%.

The S&P 500 index is down 8.9% in the year-to-date period and 0.2% in the past year.

Over the past five years, the stock has traded as high as 17.09X and as low as 2.96X, with a 5-year median of 7.1X. Our Neutral recommendation indicates that the stock will perform in-line with the market. Our \$19.00 price target reflects 4.12X forward 12-month earnings per share.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	A
Growth Score	C
Momentum Score	D
VGM Score	B

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.
