Summary

Novartis has a strong oncology portfolio and a formidable generics business. The solid performance of key drugs like Cosentyx and Entresto, and contribution from gene therapy, Zolgensma, have boosted the performance in recent times and offset the impact of generic competition for legacy drugs. New launches like Piqray, Mayzent and Beovu should further boost sales. The biosimilar portfolio also gains traction with new key approvals. The deep pipeline is encouraging as well. Novartis is also focusing on developing treatments for coronavirus and a positive outcome will boost the stock significantly. However, price erosion in the United States has adversely impacted the generics business. Moreover, pipeline setbacks and generic competition for additional drugs are concerning. Shares have underperformed the industry in the past year.

Overview

Switzerland-based Novartis has one of the strongest and broadest portfolio of oncology drugs and generics, which has enabled it to maintain its dominant position as a top pharma company over the years. Novartis is one of the leaders in healthcare solutions with a wide array of drugs and a presence in not only oncology but neuroscience, cardiovascular and generics as well.

Novartis' efforts to strengthen its wide and deep oncology portfolio by developing breakthrough treatments had made it even more formidable in this space. The FDA approval of its breakthrough gene transfer treatment Kymriah in August 2017 bolstered its position in this relatively new but competitive space. Further, in May 2019, the FDA approved Zolgensma, the first and only gene therapy for pediatric patients with spinal muscular atrophy (SMA).

Given the evolving and competitive nature of the pharma business, Novartis has constantly taken steps to reshape its business with prudent acquisitions and strategic divestitures. In March 2015, Novartis acquired certain oncology products and pipeline compounds from Glaxo for \$16 billion. In exchange, it sold its non-influenza Vaccines business to Glaxo for \$7.1 billion. Also, the company has spun off the Alcon business into a separate company to focus better on its growing pharma business. In January 2015, Novartis divested its Animal Health division to Lilly for approximately \$5.4 billion. In July 2015, the company divested its influenza vaccines business to CSL Limited for \$275 million. Apart from these, the company continues to make small tuck-in acquisitions to broaden its pipeline. Novartis recently acquired The Medicines Company, adding inclisiran — a potentially transformative cholesterol-lowering therapy — to its portfolio.

Following the separation of the Alcon business, Novartis now has two operating segments:

- **Innovative Medicines** (Pharmaceuticals): Innovative patent-protected prescription medicines and ophthalmic pharmaceutical (79.5% of 2019 Sales).
- **Sandoz**: Generic pharmaceuticals (20.5% of 2019 Sales)

Revenues for 2019 came in at \$47.5 billion, up 6% from 2018.

Reasons To Buy:

- ▲ **Strong Oncology Portfolio:** Novartis has a strong oncology portfolio, consisting of drugs like Afinitor, Exjade, Jakavi, Zykadia, Tassigna, Luthathera, Promacta and Jadenu. Particularly, Promacta/Revolade, Tafenlar + Mekinist, Jakavi, and Luthathera have fueled the top line in the recent quarters. The FDA approval of Kisqali for the first-line treatment of postmenopausal women with hormone receptor positive, human epidermal growth factor receptor-2 negative (HR+/HER2-) advanced or metastatic breast cancer has boosted the company's oncology portfolio. The label expansion of Kisqali, Zykadia, Tafenlar plus Mekinist should further drive sales. Novartis acquired Endocyte to expand expertise in radiopharmaceuticals and transformational therapeutic platforms. The acquisition added 177Lu-PSMA-617, a potential first-in-class radioligand therapy, to its diverse portfolio. The therapy is in phase III development for metastatic castration-resistant prostate cancer (mCRPC). The recent approval of Piqray for advanced or metastatic breast cancer will further strengthen Novartis' oncology portfolio. The recent approval of Piqray for advanced or metastatic breast cancer has further strengthened Novartis' oncology portfolio.
- ▲ **First CAR T Therapy Approved:** In August 2017, the FDA approved its breakthrough gene transfer treatment, Kymriah suspension, for the treatment of patients up to 25 years of age with B-cell precursor acute lymphoblastic leukemia (ALL) that is refractory or in second or later relapse. The approval is a major boost for Novartis, given the potential in the CAR T therapy space. Kymriah is the first chimeric antigen receptor T cell (CAR-T) therapy that has been approved. A novel immunocellular therapy and one-time treatment, Kymriah, uses a patient's T cells to fight cancer. The approval opens up new frontiers in the treatment of cancer by advancing immunocellular therapy for children and young adults with r/r B-cell ALL. The uptake of the drug has been strong. Meanwhile, the FDA expanded the drug's label for the treatment of adult patients with relapsed or refractory (r/r) large B-cell lymphoma after two or more lines of systemic therapy, including diffuse large B-cell lymphoma (DLBCL), high grade B-cell lymphoma and DLBCL arising from follicular lymphoma.
- ▲ **Novartis Forays Into Gene Therapy:** Novartis is looking to solidify its presence in the gene therapy space. In 2018, Novartis acquired U.S.-based, clinical-stage, gene-therapy company, AveXis, Inc, which is focused on developing novel treatments for patients suffering from rare and life-threatening neurological genetic diseases. In May 2019, the FDA approved Zolgensma, the first and only gene therapy for pediatric patients with spinal muscular atrophy (SMA), a rare genetic disorder. Zolgensma addresses the genetic root cause of SMA by providing a functional copy of the human SMN gene to halt disease progression through sustained SMN protein expression with a single, one-time intravenous (IV) infusion. The uptake of the drug was strong in 2019 and will likely propel sales.
- ▲ **Strong Biosimilars Business:** Sandoz is a strong player in the biosimilar market with five marketed biosimilars (Omnitrope, a human growth hormone; Binocrit, an erythropoiesis-stimulating agent used to treat anemia; and filgrastim for neutropenia under the brand names Zarzio outside the United States and Zarzio in the United States.). A biosimilar version of Rituxan (rituximab) was approved by the European Commission in June 2017 (marketed as Rixathon). In August 2016, Sandoz's Erelzi, a biosimilar version of Amgen blockbuster drug Enbrel gained approval in the United States for five indications. Erelzi was also approved by the European Commission in 2017. Sandoz also obtained approval for Zessly, a biosimilar version of Johnson & Johnson's Remicade, in Europe. The FDA also approved Hyrimoz, the biosimilar of Humira. Approval of additional biosimilars will fuel further growth.
- ▲ **New Drugs to Boost Portfolio:** The approval of new drugs and label expansion of existing drugs will also boost the top line, in the days to come. Heart failure drug, Entresto, and psoriasis drug, Cosentyx, have performed impressively since their launch. Psoriasis drug, Cosentyx, was also approved for the treatment of two new indications — ankylosing spondylitis (AS) and psoriatic arthritis (PsA) — in the EU in 2016. Moreover, the FDA approved Cosentyx for AS and PsA. The uptake of Cosentyx has been strong and the company has grabbed market shares from rivals, Humira and Enbrel. Additional label expansion of the drug should further propel the top line. Novartis and partner Amgen won FDA approval of Aimovig (erenumab) for the prevention of migraine in adults and the drug is off to a strong start in the United States. The drug was also approved in Europe. The FDA also approved Mayzent (siponimod), a next generation, selective sphingosine 1-phosphate receptor modulator, for the treatment of adults with relapsing forms of multiple sclerosis (MS). The FDA recently approved Adakveo (crizanlizumab) to reduce the frequency of vaso-occlusive crises (VOCs) or pain crises in patients aged 16 years or above with sickle cell disease (SCD). The FDA also approved Beovu for the treatment of wet age-related macular degeneration and the drug has been launched in the United States. The drug also obtained a positive CHMP opinion in December. Strong uptake is expected from Beovu as it is the first FDA-approved anti-VEGF to offer greater fluid resolution as compared to market-leading drug, Eylea. Beovu's potential to treat patients with quarterly injections is a major positive and should enable it to capture market share. Approval of new drugs and label expansion of existing drugs bode well for the company, as it looks to streamline its business.
- ▲ **Developing Coronavirus Treatments:** Novartis has reached an agreement with the FDA to initiate a phase III study to evaluate the efficacy and safety of malaria drug, hydroxychloroquine, in hospitalized COVID-19 patients. The FDA has allowed the use of the generic medicine, which is unapproved for COVID-19, under emergency use authorization. Novartis accelerated its research related to hydroxychloroquine to start the late-stage study in a few weeks. Meanwhile, Sandoz, the generic unit of Novartis, has committed to donate up to 130 million tablets of hydroxychloroquine globally, if the drug is proved to be beneficial. The study will complement the company's commitment to fight the pandemic. Sandoz has already made donations of 30 million tablets to the U.S. Department of Health and Human Services ("HHS") and is dispatching the drug to other countries on request. Please note that Sandoz markets a generic version of hydroxychloroquine as a treatment for malaria, under the trade name of Plaquenil. Novartis is also planning to repurpose some of its approved drugs, which are likely to be potent against COVID-19. These include systemic juvenile idiopathic arthritis drug, Ilaris (canakinumab); cancer drug, Gleevec (imatinib mesylate); psoriatic arthritis drug, Cosentyx (secukinumab); and hypertension drug, Diovan (valsartan). The company started evaluating Jakafi (ruxolitinib) in collaboration with partner Incyte in a phase III study in patients aged 12 years or older with COVID-19-associated cytokine storm.
- ▲ **Tuck In Acquisitions to Boost Pipeline:** Novartis continues to make small acquisitions to boost its pipeline and focus on other therapeutic areas apart from oncology. In Jan 2017, Novartis acquired Encore Vision, Inc, a privately-held company focused on the development of UNR844 (formerly EV06), an investigational, potentially disease modifying topical treatment for presbyopia. The Advanced Accelerator Applications acquisition added Lutathera to the company's portfolio.

Novartis has a strong oncology portfolio and continues to work on developing its immuno-oncology pipeline. Besides, Sandoz is working on further advancing its portfolio of biosimilars and generics.

Novartis recently acquired U.S.-based biopharmaceutical company, The Medicines Company, for \$85 per share in cash or a total valuation of \$9.7 billion, and added a potentially transformational investigational cholesterol-lowering therapy. The acquisition added a potentially first-in-class siRNA inhibitor targeting PCSK9, inclisiran, to its pipeline. The Medicines Company submitted the New Drug Application (NDA) for inclisiran to the FDA in December 2019.

- ▲ **Alcon Spin-Off Positive:** Novartis spun-off its ophthalmology division, Alcon, into a separately-traded standalone company in order to grow as a medicines company solely. The separation of the Alcon business is a step in the right direction, as the business was not performing as per management's expectations. While it did revive in between, the company decided to spin-off the same in order to focus better on its legacy drug business. Novartis acquired Alcon in 2011. The business then comprised surgical, vision care and ophthalmic pharmaceuticals. The company is looking to restructure its business to become a core drug-focused company, powered by data and digital technologies.
 - ▲ **Favorable Debt Profile:** Novartis has a favorable debt profile. As of Dec 31, 2019, the company's debt to total capital ratio stands at 34.4, which compares favorably to the industry's 52.4. A higher ratio indicates greater financial risk. With a cash position of \$11.5 billion and a favorable debt ratio, Novartis has a sound debt profile. Moreover, the company carries an AA- rating from Fitch (as of Dec 12, 2019). The AA rating from the agency implies very low default risk. Overall, Novartis is in good financial health.
-

Reasons To Sell:

- ▼ **Share Price Performance:** Novartis' stock has underperformed the industry in the past year.
- ▼ **Generic Threat to Key Products:** We are highly concerned about the loss of patent protection for some of the key drugs in Novartis' portfolio. Gleevec/Glivec, Diovan and Exforge face continued and increasing generic competition in major markets. The loss of patent protection for these top-selling drugs continue to hurt sales. Patent protection for Exjade has expired in the United States. Generic competition is expected to start for Afinitor in 2020. Oncology drugs are facing competition from immuno-oncology therapies. Generic versions of Sandostatin SC are available in the United States, the EU and Japan.
- ▼ **Pipeline Setbacks a Concern:** Novartis suffered quite a few pipeline setbacks. The company received a complete response letter from the FDA in October 2018 regarding its supplemental Biologics License Application for ACZ885 (brand name Ilaris) in cardiovascular risk reduction. Earlier the company received a setback when a phase IIb/III study evaluating BYM338 (bimagrumab) in sporadic inclusion body myositis failed to meet the primary endpoint.
- ▼ **Sandoz Facing Pricing Pressure:** The generic division, Sandoz, is facing stiff competition from companies that market patented pharmaceutical products as well as other generic and biosimilar pharmaceutical companies, which aggressively compete for market share, mainly through significant price competition. In particular, industry-wide price competition among generic pharmaceutical companies and consolidation of buyers caused significant declines in sales and profits of Sandoz in the United States.

Novartis is expected to face challenging conditions ahead due to generic competition for several of its key drugs.

Last Earnings Report

Novartis Earnings and Revenues Miss Estimates in Q4

Fourth-quarter 2019 core earnings (excluding one-time charges) of \$1.31 per share missed the Zacks Consensus Estimate of \$1.32 but increased from \$1.16 reported in the year-ago quarter.

Revenues rose 9% year over year to \$12.4 billion, driven by Entresto, Zolgensma, Cosentyx and Kisqali. However, revenues too missed the Zacks Consensus Estimate of \$12.49 billion.

All growth rates mentioned below are on a year-over-year basis and at constant exchange rates.

Quarter Ending **12/2019**

Report Date	Jan 29, 2020
Sales Surprise	-0.69%
EPS Surprise	-0.76%
Quarterly EPS	1.31
Annual EPS (TTM)	5.24

Quarter in Detail

Novartis operates under two segments — Innovative Medicines and Sandoz (generics).

The Innovative Medicines division recorded sales of \$9.9 billion, up 11% year over year. Within this segment, the Pharmaceuticals business unit grew 14%, driven by continued momentum on Entresto and Cosentyx and the uptake of Zolgensma.

Psoriasis drug Cosentyx continues to gain traction. Cosentyx sales increased 21% to \$965 million, driven by strong demand in the United States. Entresto sales grew 65% to \$518 million, driven by increased worldwide uptake in hospital and ambulatory settings. Increasing contributions from Zolgensma (gene therapy for pediatric patients with spinal muscular atrophy) and Xiidra also boosted this business unit.

The Oncology business unit grew 8%, driven by continued momentum in Kisqali and Kymriah and the launch uptake of Piqray. Kisqali sales surged 166%, driven by use in metastatic breast cancer patients, independent of menopausal status or combination partner, and benefiting from overall survival data, as well as strong uptake and patient share gain in Europe and other regions.

Sales at the Sandoz division were \$2.5 billion, up 2% as volume growth offset price erosion in the United States. Biopharmaceuticals sales grew 11%, driven by continued strong double-digit growth in Europe. Novartis expects the previously-announced divestment of the Sandoz US oral solids and dermatology portfolio to be completed in the first quarter of 2020, pending regulatory approval.

The Alcon business was spun-off as a separate public company on Apr 9 and hence, the results of that business are included as discontinued operations.

2019 Results

Sales came in at \$47.4 billion, increasing 9% from 2018 but missing the Zacks Consensus Estimate of \$48.35 billion. Earnings per share of \$5.28 was in line with the Zacks Consensus Estimate and grew from \$4.71 in 2018.

Guidance for 2020

The company expects net sales in 2020 to grow in mid to high-single digits. Innovative Medicines revenues are projected to grow in mid to high-single digits. Revenues from Sandoz are expected to grow in low-single digits.

Pipeline Update

The pipeline progress during the fourth quarter was encouraging.

Adakveo (crizanlizumab) was approved by the FDA to reduce the frequency of pain crises in individuals living with sickle cell disease. The approval came approximately two months ahead of the FDA's priority review action date.

Novartis obtained FDA approval for Beovu for the treatment of wet age-related macular degeneration and the drug was launched in the United States. The drug also obtained a positive CHMP opinion in December.

Mayzent (siponimod) was approved in the EU for the treatment of adult patients with active secondary progressive multiple sclerosis (SPMS).

Ziextenzo, a biosimilar of pegfilgrastim, was approved and launched in the United States.

Inclisiran, an investigational cholesterol-lowering therapy to address cardiovascular diseases, was added to the pipeline from the acquisition of The Medicines Company. Inclisiran was submitted in the United States for the treatment of primary hyperlipidemia and in the EU for mixed dyslipidemia.

Recent News

Kymriah receives FDA Regenerative Medicine Advanced Therapy – Apr 22

The FDA granted Regenerative Medicine Advanced Therapy (RMAT) designation to CAR-T cell therapy, Kymriah (tisagenlecleucel), for the indication of or refractory (r/r) follicular lymphoma (FL).

To sponsor large clinical trial of hydroxychloroquine – Apr 20

Novartis announced that it has reached an agreement with the FDA to initiate a phase III study to evaluate the efficacy and safety of malaria drug, hydroxychloroquine, in hospitalized COVID-19 patients. The FDA has allowed the use of the generic medicine, which is unapproved for COVID-19, under emergency use authorization.

Novartis accelerated its research related to hydroxychloroquine to start the late-stage study in a few weeks. The phase III study will evaluate hydroxychloroquine monotherapy and hydroxychloroquine in combination with antibiotic, azithromycin, compared to placebo in patients. As part of its fight against coronavirus, the company has announced that will make available any of its intellectual property related to hydroxychloroquine as COVID-19 treatment through non-exclusive voluntary licenses and other options for broader development of the drug.

In a separate press release, Novartis announced that it has completed the acquisition of a U.S.-based software startup, Amblyotech. The company plans to develop treatment for amblyopia or lazy eye using Amblyotech's technology in collaboration with Ubisoft and McGill University.

Evaluate Jakavi for COVID-19 – Apr 2

Novartis announced plans to initiate a Phase III clinical trial in collaboration with Incyte to evaluate the use of Jakavi(ruxolitinib) for treatment of a type of severe immune overreaction called cytokine storm that can lead to life-threatening respiratory complications in patients with COVID-19-3.

The decision is based on pre-clinical evidence and preliminary reports from independent studies. It supported by extensive data on the safety and efficacy of Jakavi in conditions like acute graft versus host disease and myeloproliferative neoplasms.

Terminates Sale of Sandoz Dermatology Business – Apr 2

Novartis announced that it will not sell Sandoz US generic oral solids and dermatology businesses to Aurobindo Pharma USA Inc.

Notably, Novartis had agreed to sell selected portions of the Sandoz US portfolio, specifically the Sandoz US dermatology business and generic US oral solids portfolio, to Aurobindo Pharma USA Inc. for \$0.8 billion in cash and potential earn-outs in September 2018.

The company has terminated the agreement of sale as approval from the U.S. Federal Trade Commission for the transaction was not obtained within anticipated timelines.

Data on Inclisiran – Mar 28

Novartis has announced encouraging results from a prespecified analysis of pooled data from three phase III studies evaluating the safety and efficacy of inclisiran, its first-in-class experimental candidate for the treatment of hyperlipidemia in adults.

The prespecified analysis of pooled data from ORION-9, -10 and -11 phase III studies shows inclisiran reduced low-density lipoprotein-cholesterol (LDL-C) by 51% in 17 months. In addition, the prespecified exploratory analysis showed fewer major adverse cardiovascular events (MACE) with inclisiran compared to placebo based on safety reporting from the three studies.

CHMP positive on Cosentyx – Mar 27

Novartis also announced that the Committee for Medicinal Products for Human Use (CHMP) of the EMA has adopted a positive opinion for spondylitis drug Cosentyx (secukinumab) for the treatment of adult patients with active non-radiographic axial spondyloarthritis (nr-axSpA).

The CHMP also adopted a positive opinion recommending conditional marketing authorization of one-time administered gene therapy Zolgensma for patients with spinal muscular atrophy (SMA) and a clinical diagnosis of Type 1 or SMA patients with up to three copies of the SMN2 gene.

Data on Zolgensma – Mar 24

Novartis announced a one-time infusion of Zolgensma showed rapid, significant and clinically meaningful therapeutic benefit in patients with spinal muscular atrophy (SMA) across a range of studies, including in patients treated presymptotically, and sustained durability in patients now up to five years post-dosing and some patients more than five years of age.

To Donate Generic Hydroxychloroquine for Coronavirus – Mar 20

Novartis announced that it will provide up to 130 million doses of generic hydroxychloroquine to support the treatment of the global COVID-19 pandemic.

Novartis plans to donate up to 130 million 200 mg doses by the end of May, including its current stock of 50 million 200 mg doses, for use in COVID-19 infected patients, supported by regulatory authorities. Novartis is also looking to ramp up its capacity to increase supply to meet global demand.

Novartis' generic arm, Sandoz, currently holds only a registration for hydroxychloroquine in the United States. The company said it will pursue appropriate regulatory authorizations from the FDA and the European Medicines Agency.

Approval of Zolgensma in Japan – Mar 19

Novartis announced that the Japanese Ministry of Health, Labour and Welfare (MHLW) approved Zolgensma for the treatment of SMA in patients under the age of two, including those who are pre-symptomatic at diagnosis.

Valuation

Novartis' shares are down 6% in the year-to-date period but up 9.7% over the trailing 12-month period. Stocks in the Zacks sub-industry and the Zacks Medical sector are up 0.1% but down 3.4% in the year-to-date period, respectively. Over the past year, the Zacks sub-industry is up 12.4% while the sector is up 1.3%.

The S&P 500 index is down 12.1% in the year-to-date period and 4.2% in the past year.

The stock is currently trading at 15.1X forward 12-month earnings per share which compares to 15.07X for the Zacks sub-industry, 21.75X for the Zacks sector and 19.83X for the S&P 500 Index.

Over the past five years, the stock has traded as high as 19.7X and as low as 11.99X, with a 5-year median of 16.02X. Our Neutral recommendation indicates that the stock will perform in-line with the market. Our \$94.00 price target reflects 15.9X forward 12-month earnings per share.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	B
Growth Score	C
Momentum Score	B
VGM Score	B

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.

Disclosures

This report contains independent commentary to be used for informational purposes only. The analysts contributing to this report do not hold any shares of this stock. The analysts contributing to this report do not serve on the board of the company that issued this stock. The EPS and revenue forecasts are the Zacks Consensus estimates, unless indicated otherwise on the reports first page. Additionally, the analysts contributing to this report certify that the views expressed herein accurately reflect the analysts personal views as to the subject securities and issuers. ZIR certifies that no part of the analysts compensation was, is, or will be, directly or indirectly, related to the specific recommendation or views expressed by the analyst in the report.

Additional information on the securities mentioned in this report is available upon request. This report is based on data obtained from sources we believe to be reliable, but is not guaranteed as to accuracy and does not purport to be complete. Any opinions expressed herein are subject to change.
