Summary

Southern Company shares have outperformed the Zacks Utility - Electric Power industry over the past year (+10.5% versus -2.9%). Leveraging the demographics of its operating territories, as in healthy population and job growth, the firm has gradually increased its customer base. With good rate base growth and constructive regulation, Southern Company is expected to generate steady earnings and dividend growth in the coming years. However, elevated leverage of the firm, along with continued timing and cost overrun issues over its Vogtle project, are major overhangs. While the electric utility holding company's debt-to-capital ratio of 60.3% restricts financial flexibility, its \$25-billion Vogtle nuclear plant has already exceeded budget and is years behind schedule. As such, Southern Company warrants a cautious stance from the investors.

Overview

Founded in 1945, Atlanta, GA-based Southern Company is one of the largest utilities in the United States. The company deals with the generation, transmission and distribution of electricity. Following its merger with AGL Resources on July 1, 2016, Southern Company serves approximately nine million customers through its seven electric and natural gas distribution units.

It serves approximately nine million customers and boasts of a generating capacity of 46,000 megawatts, around 200,000 miles of electric transmission and distribution lines, with more than 80,000 miles of natural gas pipelines.

Southern Company's operations include wholesale electricity generation and natural gas services, retail energy services and natural gas storage operations throughout the country. Southern Company's electrical utilities include Alabama Power, Georgia Power, and Mississippi Power. The firm closed the divestiture of its Gulf Power unit for \$5.8 billion in January 2019.

The company owns Southern Power and Southern Company Gas along with other direct and indirect subsidiaries. Southern Power engages in developing, owning and managing power generation assets, including renewable energy projects, as well as selling electricity at market-based rates in the wholesale market.

The electric utility firm engages in the distribution of natural gas through Southern Company Gas (formerly AGL Resources). Southern Company Gas' distribution utilities include Atlanta Gas Light, Chattanooga Gas, Nicor Gas and Virginia Natural Gas. The company completed the sale of Elizabethtown, Elkton and Florida City gas units in 2018. Southern Gas Company operates in four segments: Gas Distribution Operations, Gas Pipeline Investments, Wholesale Gas Services, and Gas Marketing Services.

Southern Company also owns membership interests in SCS, Southern Linc, Southern Holdings, Southern Nuclear, PowerSecure, and other direct and indirect subsidiaries. Notably, Southern Nuclear provides services to the Southern Company's nuclear power plants and is currently managing construction of Vogtle Units 3 and 4, which are co-owned by Georgia Power.

Reasons To Buy:

- ▲ Southern Company is one of the largest electric utility holding companies in the U.S., and the premier energy firm serving the attractive Southeast market. Positioned in a niche industry with high barriers to entry, Southern's less-volatile, recession-proof business model presents a unique opportunity to earn high returns.
- ▲ Southern Company's seven major regulated utilities serve approximately nine million electric and natural gas customers. Leveraging the demographics of its operating territories (as in healthy population and job growth), the firm aims to further expand its regulated business customer base. As part of that plan, Southern Company has added 30,000 residential electric and 21,000 residential gas customers in 2019, underpinning growth.
- ▲ Southern Company's divestment deals with NextEra and Global Atlantic Financial Group worth \$6.5 billion and \$1.2 billion respectively, should help the utility to streamline its portfolio, boost utility returns, along with raise cash to repay debts and pay for the new reactors for its Vogtle Project.
- ▲ Southern Company has a long and consistent dividend paying record. Recently, the company declared a hike in its dividend by 8 cents per share on an annualized basis to a rate of \$2.56 per share. This marks the company's 19th consecutive year dividend hike on its common stock. As such, Southern's dividend is perceived to be safe and reliable. The utility's

Southern Company's less-volatile, recession-proof business model presents a unique opportunity to earn high returns.

Reasons To Sell:

- ▼ Though Southern Company won unanimous approval for the construction of Vogtle plant, the decision to continue with the project may increase the credit risk of the company. The Vogtle project is being bankrolled with more than \$8 billion in federal loans and loan guarantees. The project, which has been missing milestone dates and suffering from poor productivity rates, is likely to suffer from further ballooning costs. This will hurt the utility's already weak financials. The increasing capital intensity of its operations may also result in reduced returns going forward.
- ▼ Southern Company's much delayed clean coal power plant project Kemper in Mississippi suffered another setback when all coal gasification operations were suspended. The Kemper Project has been facing continuous criticism owing to its poor execution, cost overruns and multiple delays. The plant is already three years behind schedule and is over \$4 billion beyond the stipulated budget. In the past two years or so, the company has announced 10 delays due to project management problems. The project found it difficult to get its two gasifiers to operate consistently.
- ▼ Southern Company's high leverage restricts its financial flexibility. As of Dec 31, the utility's long-term debt stood at \$43.4 billion and a total debt-to-capitalization ratio of 59.3. Apart from a rise in immediate finance costs, the high debt level will also require significant cash flows for repayments. Moreover, in the past one year, Southern Company's debt-to-capitalization ratio has persistently been higher than the composite stocks in the industry, reflecting more levered balance sheet.
- ▼ With approximately a third of the company's total retail sales coming from industrial customers, a sluggish economy severely affects the fortunes of Southern, as compared to other utilities that are less dependent on the industrial component.

The continued timing and cost overrun issues over two large construction projects – Vogtle and Kemper – may hamper Southern Company's results in the next few quarters.

Last Earnings Report

Southern Company Beats on Q4 Earnings, Sales Miss Mark

Power supplier Southern Company reported fourth-quarter 2019 earnings per share (excluding certain one-time items) of 27 cents, surpassing the Zacks Consensus Estimate of 26 cents and the year-ago profit of 25 cents. The robust performance primarily stemmed from positive effects of rates and pricing changes, as well as lower operating expenses.

Leveraging the demographics of its operating territories (as in healthy population and job growth), the firm has been able to consistently expand its regulated business customer base. As part of that plan, Southern Company has added 41,000 residential electric and 30,000 residential gas customers in 2019, underpinning growth.

The Atlanta-based utility's quarterly revenue – at \$4.9 billion – missed the Zacks Consensus Estimate of \$5 billion and was 7.9% lower than fourth-quarter 2018 sales on account of loss of revenues from asset dispositions.

Vogtle Updates

Per Southern Company's latest earnings presentation, it continues to progress toward completing the Units 3 and 4 of the Vogtle nuclear project by the November 2021 and November 2022 regulatory approved in-service dates. The utility also expects no change in the project's total estimated costs.

Overall Sales Breakup

Southern Company's wholesale power sales increased 3.2%. However, this was more than offset by a steep fall in retail electricity demand amid strategic sale of certain assets.

Consequently, there was a downward movement in overall electricity sales and usage. In fact, total electricity sales during the fourth quarter were down 6.8% from the same period last year.

Southern Company's total retail sales decreased 9.8%, with residential and commercial sales going down by 13.9% and 8.3%, respectively. Moreover, industrial sales declined 7.2%.

Expenses Summary

The power supplier's operations and maintenance cost edged up 2.4% to \$1.7 billion, but the utility's total operating expense for the period – at \$4.2 billion – was down 11.2% from the prior-year level. The reduction was primarily on account of lower fuel and purchased power cost, as well as gain on asset sales.

Quarter Ending **12/2019**

Report Date	Feb 20, 2020
Sales Surprise	-2.16%
EPS Surprise	3.85%

Annual EPS (TTM)	3.11

Recent News

Southern Company Hikes Dividend

On **Apr 20**, Southern Company's board of directors declared a hike in its dividend by 8 cents per share on an annualized basis to a rate of \$2.56 per share. This marks the company's 19th consecutive year dividend hike on its common stock.

Further, the company announced quarterly cash dividend of 64 cents per share, indicating an increase of 2 cents per share from the earlier quarter, to its common shareholders of record on May 18, 2020. The payout will be made on Jun 8.

Valuation

Southern Company shares are down 9.3% in the year-to-date period and up 10.5% over the trailing 12-month period. Stocks in the Zacks subindustry and the Zacks Utilities sector are down 12.1% and 15.1% in the year-to-date period, respectively. Over the past year, the Zacks subindustry and sector are down 2.9% and 19.2%, respectively.

The S&P 500 index is down 12% in the year-to-date period and 4.2% in the past year.

The stock is currently trading at 11.05X trailing 12-month EV/EBITDA, which compares to 11.84X for the Zacks sub-industry, 16.36X for the Zacks sector and 3.76X for the S&P 500 index.

Over the past five years, the stock has traded as high as 13.25X and as low as 9.43X, with a 5-year median of 10.97X. Our Neutral recommendation indicates that the stock will perform in-line with the market. Our \$62 price target reflects 4.44X F12M sales.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	D
Growth Score	D
Momentum Score	D
VGM Score	F

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.
