Summary

Wheaton's first-quarter 2020 earnings and revenues beat the respective Zacks Consensus Estimate and increased year on year. It has withdrawn current-year production guidance due to temporary ramp down of operations at some of its partner mines amid coronavirus pandemic. Wheaton's partner operations are currently running with the exception of Voisey's Bay, Constanca, Yauliyacu, San Dimas, Los Filos, Antamina and Peñasquito mines. The company's revenues are particularly sensitive to changes in the prices of precious metals and cobalt, thus, decline in commodity prices due to the pandemic is likely to mar Wheaton's revenues. However, Wheaton's strong cash position, operating cash flows combined with available credit capacity provide scope for continued investments to acquire additional accretive precious metals.

Overview

Wheaton Precious Metals is one of the largest precious metal streaming companies in the world that generates its revenues primarily from the sale of gold, silver and palladium.

Wheaton currently has streaming agreements that cover 19 operating mines and 9 development stage projects. The company's production profile is driven by a high-quality portfolio of low-cost, long-life assets that include a gold stream on Vale's Salobo mine, silver streams on Glencore's Antamina mine and Goldcorp's Peñasquito mine.

The company offers investors leverage to increasing precious metals prices, a sustainable dividend payout as well as organic and acquisition growth opportunities.

Wheaton's operating costs are contractually set at the time the stream is entered into, which enables investors to benefit from cost predictability and strong margin growth amid rising metal prices.

Wheaton was very active on the corporate development front in 2018. It has added two new low-cost, long-life assets to high-quality portfolio — the Voisey's Bay mine and the Stillwater mines.

The company has entered into 23 long-term purchase agreements with 17 different mining companies for the purchase of precious metals and cobalt (precious metal purchase agreements or "PMPA"). Following the PMPAs, Wheaton acquires metal production from the counterparties for an initial upfront payment plus an additional cash payment for each ounce or pound delivered that is fixed by contract, generally at or below the prevailing market price.

The primary drivers of the company's financial results are the volume of metal production at the various mines to which the PMPAs relate and the price realized by Wheaton upon the sale of the metals received.

Reasons To Buy:

- ▲ Wheaton remains focused on mine exploration and expansion activities. The company expects higher production of silver grade at Penasquito mine in the current year as Newmont initiated improvement program to drive productivity and grade. At Constancia, Hudbay has secured the surface rights for the Pampacancha deposit and expects to begin mining the satellite deposit in late 2020. At the Stillwater mine, palladium and gold production is expected to increase with the continued ramp-up of the mill projects. These projects are expected to be growth drivers in the coming years. In October, Vale invested in the Salobo III mine expansion, wherein 47% expansion has been completed at the end of the first-quarter 2020. Vale anticipates that the Salobo expansion is scheduled to commence in the first half of 2022. This will enhance the mine's throughput capacity to 36 million ton per annum (Mtpa) from current level of 24 Mtpa.
- ▲ Wheaton generates its revenues primarily from the sale of precious metals that includes gold, silver and palladium. The company has diversified portfolio of high-quality, long-life assets. It is focused on adding additional production capacity from high-quality accretive metals. Moreover, its business model focuses on reducing risk while leveraging higher commodity prices. Wheaton has also been active on the corporate development front. In 2018, the company added two new low-cost, long-life assets to its high-quality portfolio, the Voisey's Bay mine and the Stillwater mines.
- ▲ Wheaton's efforts to reduce its debt levels appear encouraging. The company's long-term debt was \$719 million at the end of first-quarter 2020. This has been lowered from \$878 million at the end of fourth-quarter 2019. Its total debt to total capital ratio stands at 12.1, lower than its industry's 44.2. Wheaton's cash position, strong operating cash flows combined with available credit capacity of more than \$1.1 billion, under the revolving facility of \$2 billion enable the company to invest as well as sustain dividend policy. They also provide flexibility to acquire additional accretive precious metals.
- ▲ Gold prices have been up 14.1% so far this year fueled by the slowdown in manufacturing activity, rate cuts, geopolitical tensions, and apprehensions regarding the coronavirus outbreak. Going forward, the combination of lower mined gold supply and higher demand, and geopolitical tensions are likely to drive prices north. This bodes well for Wheaton.

Wheaton is poised to gain from diversified portfolio of high-quality and long-life assets, mine expansions and acquisitions. Further, strong cash position will drive growth.

Reasons To Sell:

- ▼ Metal producers worldwide are suspending production, slowing project construction as governments are imposing restrictions to contain the spread of coronavirus. Consequently, Wheaton has withdrawn the production guidance for the current year due to temporary ramp down of operations at some of its partner mines amid the coronavirus pandemic. As of May 6, six partner operations located in Mexico and Peru, in which Wheaton has precious metals purchase agreement (Constancia, Yauliyacu, San Dimas, Los Filos, Peñasquito and Antamina) were temporarily suspended to comply with government restrictions to contain spread of the virus. Moreover, the company's operations at the Voisey's Bay mine in Canada have been temporarily suspended but are forecast to restart prior to 2021, when the company is scheduled to begin receiving cobalt. Hence, suspension of these mining operations is likely to hurt Wheaton's business in the near term.
- ▼ Wheaton's financials will likely be affected by changes in the market price of commodities underlying the royalties, streams, working interests and investments. Silver prices have slumped 4.3% so far this year, primarily be attributed to the coronavirus pandemic, which has disrupted global economic activity consequently weakening consumption of industrial raw materials. The situation has only been aggravated by the fact that silver is already in oversupply. Palladium prices have also dipped on worries of a further supply shortage in 2020 amid rapidly rising demand from automakers. Thus, decline in the commodity prices is likely to affect the company's revenues. Sustained low prices are also expected to have a material adverse impact on the company's financial position and ability to raise capital.
- ▼ Wheaton is engaged in exploration, development and mining opportunities in the resource industry and acquisitions. Thus, the company will likely incur higher debt related to acquisitions. The company is also exposed to liquidity risks in meeting operating expenditures.

Wheaton's results likely be hurt by changes in the prices of precious metals and cobalt. Suspension of mining operations due to the coronavirus pandemic is also likely to impact results.

Last Earnings Report

Wheaton Beats On Q1 Earnings, Suspends '20 Guidance

Wheaton reported adjusted earnings of 22 cents per share in first-quarter 2020, beating the Zacks Consensus Estimate of 21 cents. The bottom line also surged 68.8% year over year.

The company generated revenues of \$255 million in the reported quarter, up 13.2% on a year-over-year basis. Also, the top line outpaced the Zacks Consensus Estimate of \$251 million. This upside was driven by an 18% increase in the average realized gold equivalent price, partly offset by a 4% decrease in gold equivalent ounces sold.

Wheaton's attributable gold production was 182,241 ounces, up from the prior-year quarter's 169,098 ounces, primarily driven by record attributable silver production at the Peñasquito mine. Attributable silver production increased 18.5% year over year to 6,704 ounces, while palladium production grew 12.3% year over year to 5,312 ounces.

The company sold 166,121 Gold Equivalent Ounces (GEOs) in the first quarter, down from the prior-year quarter's 173,464 GEOs.

Prices

In first-quarter 2020, average gold price was \$1,589 per ounce, 21.5% higher than the year-ago quarter figure. Silver prices averaged \$17.03 per ounce in the first quarter, up 8.9% year over year. Palladium prices jumped 59.2% year over year to \$2,298 per ounce.

Financial Position

The company had \$127 million of cash in hand as of Mar 31, 2020, up from \$104 million as of Dec 31, 2019. It recorded an operating cash flow of \$178 million in the reported quarter compared with the prior-year quarter's \$118 million. The company had outstanding liability of \$716 million under its \$2-billion revolving credit facility. During the January-March quarter, Wheaton repaid \$159 million under the revolving facility. At the first-quarter end, net debt reduced by \$182 million to \$589 million.

Guidance Suspension

Wheaton has withdrawn the production guidance for the current year due to the temporary ramp down of operations at some of its partner mines amid the coronavirus pandemic.

As of May 5, six partner operations located in Mexico and Peru (Constancia, Yauliyacu, San Dimas, Los Filos, Peñasquito and Antamina) were temporarily suspended to comply with government restrictions to contain spread of the virus.

Quarter Ending 03/2020

Annual EPS (TTM)	0.64

Recent News

Wheaton Withdraws '20 Production Guidance on Coronavirus Scare - Apr 2, 2020

Wheaton has withdrawn the production guidance for the current year due to temporary ramp down of operations at some of its partner mines amid coronavirus pandemic.

The outbreak has dealt a severe blow to both commodity and stock markets. Given the current market conditions, commodity-price uncertainty underscores Wheaton's low-risk, high-margin nature of business. The company's 88% of production comes from lower cost mines with higher margins, and hence, at the current lower base metal prices, the company's partner operations are well poised to run with low commodity-price cycles.

However, the company's revenues are particularly sensitive to changes in the prices of precious metals and cobalt, as it derives all of its revenues from these metals. Thus, decline in commodity prices is likely to erode Wheaton's revenues.

Wheaton continues to generate strong free cash flow with current debt levels. The company has \$104 million cash in hand, with available credit capacity of more than \$1.1 billion, under the revolving facility of \$2 billion as of Dec 31, 2019. This bodes well for the company to fund outstanding commitments and known contingencies, including dividends, while also providing flexibility to acquire additional accretive precious metal stream interests. For 2020, Wheaton's board of directors has hiked the quarterly dividend by 11% year over year to 10 cents per share.

Wheaton has precious metal (gold, silver and palladium) purchase agreement with several other mining companies. These companies have halted their mining operations in an attempt to contain spread of the coronavirus outbreak. Wheaton's partner operations are currently running with the exception of Voisey's Bay, Constancia, Yauliyacu, and Peñasquito mines.

Vale announced that it is placing its Voisey's Bay mining operation in Canada on care and maintenance for a period of four weeks to ensure safety of its employees and local communities. Wheaton expects to receive cobalt deliveries from Voisey's Bay mine from Jan 1, 2021. Consequently, the company does not expect any material impact on future deliveries from the temporary shutdown.

Hudbay Minerals also temporarily ramped down its operations at the Constancia mine due to limited availability of certain critical mining supplies as the Peruvian government imposed restrictions on account of the coronavirus outbreak. The Yauliyacu mine has also temporarily halted mining operations due to supply-chain disruptions in Peru.

Apart from this, the Mexican government has instructed all non-essential businesses to temporarily shut down their operations until Apr 30. As a result, Newmont intends to ramp down operations at the Peñasquito mine. Wheaton has precious metal purchase agreements with other Mexican mining operations, like San Dimas and Los Filos mines.

Additionally, the company is taking precautionary measures for health and safety of its employees on account of the coronavirus outbreak and implementing measures to minimize any possible impact on the business.

Valuation

Wheaton's shares are up 125.4% over the trailing 12-month period. Stocks in the Zacks Mining - Miscellaneous industry and the Zacks Basics Materials sector were down 3.8% and 6.4% over the past year, respectively.

The S&P 500 index is up 3.8% in the past year.

The stock is currently trading at 47.19X forward 12-month earnings, which compares to 11.12X for the Zacks sub-industry, 16.27X for the Zacks sector and 21.52X for the S&P 500 index.

Over the past five years, the stock has traded as high as 52.35X and as low as 16.53X, with a 5-year median of 30.44X.

Our Neutral recommendation indicates that the stock will perform in-line with the market. Our \$48 price target reflects 50.19X forward 12-month earnings.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	D
Growth Score	B
Momentum Score	D
VGM Score	C

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.
