Summary

Xilinx continues to benefit from significant contributions from storage and networking customers. Moreover, growing demand for the company's 16-nanometer UltraScale+ family and Zynq platform are likely to remain major growth drivers. Furthermore, datacenter revenues are likely to continue growing due to expansion of the business at multiple hyperscalers. Additionally, the acquisition of Solarflare would bring in incremental revenues in the subsequent quarters. Nonetheless, slowdown in 5G rollout across multiple regions is a downside. Further, the impact of Huawei ban and other trade-related uncertainties remain major headwinds. Persistent softness in WWG business is a major negative.

Overview

San Jose, CA-based Xilinx Inc., founded in 1984, designs and manufactures a broad range of programmable devices and associated technologies. This includes high-performance, high-density programmable logic devices (PLDs) such as programmable system on chips and three dimensional ICs; adaptive compute acceleration platform (ACAP); software design tools to program the PLDs; software development environments and embedded platforms; targeted reference designs; printed circuit boards and intellectual property (IP) core licenses covering Ethernet, memory controllers, Interlaken and peripheral component interconnect express interfaces as well as domain-specific IP in the areas of embedded, digital signal processing and connectivity plus market-specific IP cores.

In fiscal 2019, the company reported more than \$3 billion of revenues, up 24% over the fiscal 2018 figure.

The company classifies its products into two categories:

Advanced Products (64% of fiscal 2019 revenues) include Alveo, UltraScale+, Ultrascale and 7-series products.

Core Products (36%) include Virtex-6, Spartan-6, Virtex-5, CoolRunner- II Virtex-4, Virtex-II, Spartan-3, Spartan-2, XC9500 products, configuration solutions, software & support/services.

The company provides solutions for electronic equipment makers in wired and wireless communications, industrial, scientific and medical, aerospace and defense, audio, video and broadcast, consumer, automotive and data processing markets.

The company sells its products and services through independent domestic and foreign distributors and via direct sales to the original equipment manufacturers (OEMs) and its electronic manufacturing service providers (EMS). Sales are generated by these independent distributors, independent sales representative or the company's direct sales organization.

Starting first-quarter fiscal 2020, Xilinx changed its revenue reporting structure. Going forward, Communications is now called Wired and Wireless Group (WWG). Data Center Group is reported separately and include high-performance computing. While Aerospace & Defense, Industrial and Test plus Measurement & Emulation (TME) is called AIT, the Automotive, Broadcast and Consumer group is called ABC.

Reasons To Buy:

- ▲ Xilinx's ongoing transition from a FPGA provider to an all-programmable devices producer has been helping the company gain market share. Its expanding product portfolio, which includes the Zynq RFSoc platform, is assisting it to counter intense competition from the likes of Intel. The company's Zynq portfolio, which is implemented in both the 28-nm and 16-nm node, is delivering sturdy top-line growth. The company has started shipping of the 16-nm RFSoc Silicon In-house family of product, which offers a superior architectural solution to 5G wireless with integrated RF-class analog technology. Moreover, its newly launched 7nm ACAP Versal platform is expected to be a game changer.
- ▲ We are optimistic over the demand of Xilinx's Ultrascale+ FPGAs by data-center operators for providing FPGA-as-a-Service. Amazon was the first to use Xilinx chips and started offering FPGA-as-a-Service in May 2017. The company's leadership position in China market with regard to FPGA-as-a-Service expanded with Alibaba moving from beta to general access. Alibaba Cloud recently announced that Xilinx is powering the data center and is being used by their cloud services enterprise customers. The company's Zynq MPSoc is powering Baidu's production-ready Apollo Computing Unit for automated valet parking.
- ▲ The ever-evolving technology sector has been witnessing a number of new trends over the past couple of years. Of these, the notable ones include AI, 5G connectivity, autonomous vehicles and IoT. This has created a whole new opportunity for hardware and software companies, in turn, increasing demand for programmable chips. We consider that the demand for FPGAs will surge over the long run, backed by its unique feature of the ability to be reprogrammed to the desired application or functionality requirements after manufacturing. Notably, Xilinx is a market leader in the FPGA market, with 58% share and has over one-year technology lead over its closest rival – Intel. Therefore, we believe that Xilinx is well placed to grab the opportunity arising from an increase in adoption of AI technologies, 5G connectivity, autonomous vehicles and IoT.
- ▲ Xilinx has significant exposure to Telecom & Wireless vertical markets. These markets are strongly co-related with global GDP growth and spending behavior. Most of the emerging economies are seeing unprecedented demand for mobile devices like smartphones and tablets and are also getting increasingly connected via the Internet. This has compelled these countries to heavily invest in Telecom & Wireless infrastructure. The growing usage of Zynq RFSocs and ACAP products for 5G deployments by both basebands and radios is a positive.
- ▲ The FPGA industry has a high barrier to entry. Bottlenecks such as a unique skill set that combines semiconductor and software expertise; high investment, especially at leading technology nodes; lack of third-party development tools; and intellectual property make this space less attractive. Hence, the FPGA market is operating as a duopoly with two key players, Xilinx and Altera, dominating approximately 80% of the market.
- ▲ We are encouraged by Xilinx's endeavor to return shareholder value through continued share buybacks and dividends. Continuing with its policy of returning cash to shareholders, in fiscal 2019, Xilinx returned \$526 million to its shareholders through a combination of buybacks and dividends. The company repurchased 2.4 million shares worth \$162 million and paid a total of \$364 million in dividends. These investor-friendly initiatives not only boost the company's earnings but also instill investor confidence and loyalty in the stock.
- ▲ Xilinx's strategy to drive operational efficiency is a positive. Notably, the company is reducing its global workflow by 7% and taking several steps to control discretionary spending. These actions are expected to result in savings of \$17 million to \$20 million from operating expenses in the fiscal fourth quarter.

Xilinx is well-positioned to tap the opportunities arising from an increase in the adoption of AI technologies, 5G connectivity, autonomous vehicles and IoTs, which will drive growth in the long run.

Reasons To Sell:

- ▼ Xilinx could face challenges from its biggest competitor, Intel. After acquiring Altera in 2015, Intel has been developing high-end high-performance next-generation 14 nm FPGA chips by using its 14 nm tri-gate transistor technology. To remain competitive, Xilinx is planning a transition to the 16 nm node using Taiwan Semiconductor Company's FinFET technology. However, as Intel's manufacturing process is technologically more advanced, we do not expect Xilinx to outperform Intel in the lower dimension nodes. Apart from this, both the companies are likely to compete in 20 nm products that are still under production.
- ▼ By acquiring Altera, Intel now has a strategic advantage over Xilinx regarding its HardCopy offering (a new type of high performance ASIC for which Xilinx does not have a competing product). HardCopy offers the performance of an ASIC and the flexibility of a PLD. HardCopy devices, therefore, have the potential to drive future revenues due to their low costs and ability to address opportunities beyond the PLD market. As far as development costs are concerned, ASICs are more economical and offer improved chip performance than PLDs when used in high-volume production. Therefore, they are ideal for large-volume, low-cost appliances such as consumer electronics. Customers often opt for PLDs initially for their time-to-market benefits and then shift to ASICs to produce greater volumes at lower costs. With no exposure into ASICs, it will be difficult for Xilinx to outperform Intel.
- ▼ Xilinx keeps on innovating for producing advanced FPGAs of lower geometries to improve performance, density and system-level functionality, integration, and lower cost and power consumption at each manufacturing process node. With each transition to a new process node, there are considerable tape-out costs, the need to navigate the learning curve and limited volume production, which are all significant headwinds for margins and profitability. Xilinx is on the verge of a 20-nm and 16-nm transition, so there will be related pressure on gross margin.
- ▼ Xilinx is hurt by the suspension of shipments to Huawei due to the export ban imposed by the U.S. government. On the earnings call, management mentioned that the company forecasts WWG business to be down significantly in the fiscal fourth quarter. Slowdown in both 5G and wired infrastructure deployments coupled with the ongoing global trade headwinds is likely to dent WWG business. Notably, the impact of Huawei ban and other trade-related uncertainties forced the company to provide a downbeat outlook for fourth-quarter fiscal 2020.

5G deployment and a few other product mixes are a threat to gross margin. Stiff competition from peers is another material headwind.

Last Earnings Report

Xilinx Q3 Earnings Top, Revenues Miss, Q4 View Upsets

Xilinx delivered third-quarter fiscal 2020 earnings of 68 cents per share, higher than the Zacks Consensus Estimate of 64 cents. However, the bottom line was 26% lower than the prior-year quarterly figure of 92 cents.

Revenues declined 10% year over year to \$723 million and missed the Zacks Consensus Estimate of \$726 million as well. Weakness in the WWG business is a major overhang on the company.

Management now anticipates a more gradual recovery in revenues than what it had earlier envisioned in the beginning of the fiscal third quarter. Higher-than-anticipated softness in WWG business is likely to persist as a dampener in the fiscal fourth quarter.

Quarter in Detail

Product wise, Advanced product revenues declined 4% year over year, contributing 70% to total revenues. However, the same from core products (30% of total) decreased 21% from the year-ago quarter.

Despite the impact of a deteriorating wired and wireless business, Zynq-based revenues grew 26% on a year-over-year basis. The Zynq SoC platform including Zynq at 28 nm and both MPSoC and RFSoc at 16 nm, accounted for 23% of the total revenues.

On the basis of end markets, WWG revenues (31% of total revenues) dropped 18% year over year. Anticipated baseband ASIC transition and some program-related delays with one of Xilinx's global OEMs was a spoiler. Slowdown in 5G rollout across multiple regions is a downside. Further, broad-based decline in demand across multiple customers adversely impacted the wired business.

Automotive, Broadcast and Consumer group (ABC) (19% of total revenues) increased 10% year over year. The automotive business suffered macroeconomic and trade related headwinds.

A&D, Industrial and TME (AIT) revenues (40% of total revenues) fell 10% on a year-over-year basis. The company witnessed increased revenues from emulation and prototyping customers in TME market.

Data Center revenues (9% of total) improved 8% from the year-ago period, primarily owing to sales of both compute and networking products to hyperscale customers. Better-than-expected networking revenues from Solarflare were also a tailwind. Dwindling demand from high-performance computing and some crypto customers was a challenge.

Geographically, the company registered a year-over-year decrease of 6% in the Asia Pacific and 4% in Japan. While Europe and North America fell 19% and 10%, respectively.

Margins

Gross margin came in at 68%, down 100 bps year over year.

Non-GAAP OpEx was \$318 million, significantly lower than the guidance of \$330 million due to reduction in hiring and discretionary spending.

The company posted non-GAAP operating income of \$174 million, down 34% year over year. Operating margin contracted 890 bps to 24%.

Balance Sheet and Cash Flow

Xilinx exited the fiscal third quarter with cash, cash equivalents and short-term investments of approximately \$2.43 billion compared with \$2.52 billion sequentially.

The company has total long-term debt of \$1.246 billion.

Xilinx generated \$324 million of cash from operations compared with \$224 million in the earlier reported quarter.

During the quarter, the company repurchased 2.8 million shares at an average price of \$93.70 per share and paid out dividends worth \$93 million.

Outlook

For fourth-quarter fiscal 2020, Xilinx projects revenues in the range of \$750-\$780 million.

On the earnings call, management mentioned that the company forecasts WWG business to be down significantly in the fiscal fourth quarter. Slowdown in both 5G and wired infrastructure deployments coupled with the ongoing global trade headwinds is likely to dent WWG business.

However, meaningful improvement in the core markets and moderate growth in DCG is likely to remain a tailwind.

The company expects both A&D and ISM to improve in the fiscal fourth quarter. Automotive is also likely to rebound owing to increase in ADAS demand relative to the fiscal third quarter.

Gross margin is forecast to be 68.5-70.5%. Operating expenses are projected in the range of \$316-\$320 million for the fiscal fourth quarter.

Quarter Ending **12/2019**

Report Date	Jan 28, 2020
Sales Surprise	-0.30%
EPS Surprise	6.25%
Quarterly EPS	0.68
Annual EPS (TTM)	3.53

Recent News

On Mar 10, 2020, Xilinx enhanced its Versal ACAP portfolio by launching Versal Premium platform. The platform features highly integrated, networked and power-optimized cores. Versal Premium has the industry's highest bandwidth and compute density on an adaptable platform.

On Mar 3, 2020, Xilinx unveiled industry's first SmartNIC platform Alveo U25 SmartNIC, which will deliver convergence of network, storage and compute acceleration functions on a single device.

On Dec 19, 2019, Xilinx announced that its Automotive Zynq UltraScale+ MPSoC is enabling Baidu's BIDU Apollo Computing Unit (ACU)-Advanced platform for Automated Valet Parking (AVP).

On Nov 12, 2019, Xilinx expanded its automotive-qualified 16 nanometer (nm) family with two new devices – the Xilinx Automotive (XA) Zynq UltraScale+ MPSoC 7EV and 11EG. The company also announced that its Vitis unified software platform is available for download.

Valuation

Shares of Xilinx have declined 16.3% in the past six months and 36.6% over the trailing 12-month period. Stocks in the Zacks sub-industry lost 21.8% in the past six months, while the Zacks Computer & Technology sector fell 7.8%. Over the past year, the Zacks sub-industry has lost 40.7% and the sector fell 5.1%.

The S&P 500 Index has declined 16.7% in the past six months and 12.8% in the past year.

The stock is currently trading at 22.25X forward 12-month earnings, which compares to 21.63X for the Zacks sub-industry, 17.88X for the Zacks sector and 14.92X for the S&P 500 index.

Over the past five years, the stock has traded as high as 37.41X and as low as 17.74X with a 5-year median of 24.04X. Our Neutral recommendation indicates that the stock will perform in-line with the market. Our \$84 price target reflects 23.36X forward 12-month earnings.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	D
Growth Score	C
Momentum Score	B
VGM Score	D

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.
